## Single width Aluminum Scaffolding

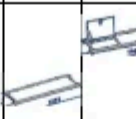

Easy World offers **Single width aluminum mobile scaffolding** refers to a specific type of mobile scaffolding that has a narrower width, typically designed for smaller, more confined workspaces. The "single width" means that the scaffold's platform is usually around 0.7 to 1 meter (2.3 to 3.3 feet) wide, making it ideal for tight areas where a wider scaffold wouldn't fit.

### Key features of single width aluminum mobile scaffolding:

1. **Compact and Narrow:** This type of scaffolding is designed to fit into smaller or more restricted areas where a larger scaffold wouldn't be practical, such as hallways, corridors, or between machinery.
2. **Lightweight:** Like other aluminum scaffolds, it's made from lightweight aluminum, making it easy to transport and maneuver by a single person.

3. **Portable and Mobile:** The scaffolding is mounted on wheels or casters, allowing it to be moved easily from one location to another without disassembly.
4. **Adjustable Height:** Single width aluminum scaffolds usually come with adjustable platforms, giving flexibility for working at different heights.
5. **Safe and Stable:** These scaffolds typically include guardrails and other safety features to ensure worker safety at height.

Single width scaffolding is often used in tasks like maintenance, painting, or installation work in areas with limited space, offering a convenient and safe platform for workers to perform tasks at elevated levels.
